

Chat GPT Prompt

PROMPT 1

"Hey, I'm working on a project where I need to build a deep learning model for a dataset with numerical features. I want to make sure the model is well-structured and optimized for accuracy while avoiding overfitting. Can you help me design a solid Deep Neural Network (DNN) using TensorFlow/Keras, with the right activation functions, dropout layers, and an effective optimizer

PROMPT 2 (Attempt 2nd)

I have a tar file named "photos." Using code, I extracted approximately 200,000 photos and generated a labels file called "photos.csv." Since the dataset is too large, I want to take a sample from both sources and remove any mismatched data. For example, if a file exists in the photo folder but not in the CSV file, please remove it.

PROMPT 3

ModuleNotFoundError Traceback (most recent call last) Cell In[4], line 4 2 import numpy as np 3 import pandas as pd ----> 4 import cv2 5 import matplotlib.pyplot as plt 6 import seaborn as sns ModuleNotFoundError: No module named 'cv2'

Fix this error for me. I'm not able to install cv2 lib in my code.
